

Remote Monitoring and Management

wizard
CYBERSECURITY & MSP

Managing an IT network can be a full-time job. Without measures to alert administrators to network maintenance needs, internal security risks can quickly snowball.

By working with a third-party organization to manage your IT services, this hassle and risk can be addressed before it becomes an issue. Get fully managed solutions for:

Cybersecurity: anti-malware, dark web monitoring, identity and access management, internal and external threat prevention, training, and more.

Cloud: Microsoft 365®, Infrastructure-as-a-Service (IaaS), Platform-as-a-Service (PaaS), storage, backup, file-sharing, and more.

Compliance: HIPAA, PCI-DSS, GDPR, CMMC, and more.

The Cost of Ignoring Routine IT Maintenance

- Compounding Security Risks – The more compromised your network, the easier it is to exploit.
- Low Accountability – Without robust network monitoring in place, threat actors can do as they please.
- Costly Clean-Up – Depending on the severity, duration and scale, a single data breach can cost an organization millions.

INVENTORY IT ENVIRONMENTS

From BYOD and IoT devices to devices that haven't been turned on in months, map what's in your environment.

CATCH VULNERABILITIES FASTER

With continuous monitoring and critical alerts in place, we can address key issues as they arise.

REMEDIATE CRITICAL ISSUES

Monitor for critical security vulnerabilities in real-time, so immediate action can be taken to prevent exploitation

KEEP PATCHING UPDATED

Instead of pushing patches for later, get updates and patches pushed live as soon as possible to prevent costly incident remediation.

CONTACT US TO LEARN HOW WE CAN FULLY MANAGE CRITICAL IT TASKS FOR YOUR ORGANIZATION.
