

Managed SIEM from Huntress and Wizard Computer Services

Simple, Always-On Security for Real-World Businesses

Cyberattacks don't wait for business hours. Ransomware, suspicious logins, and strange activity can pop up at any time – and if no one is watching, small issues can quickly become business-stopping incidents.

Partnering with **Huntress Managed SIEM** gives you a 24/7 security operations team watchin gover your environment, so you don't have to. You get advanced threat detection and real human experts responding in the background, without the noise, confusion, or complexity of traditional security tools.

What Is SIEM (and Why It Matters)

A **SIEM** (Security Information and Event Management) platform is like a digital security watchdog for your business:

- It continuously collects security signals from across your network — servers, workstations, cloud apps, logins, and more.
- It filters out harmless activity and highlights what's truly suspicious.
- When something serious happens, security experts are alerted and can step in quickly.

Instead of hoping someone notices a problem in time, SIEM makes sure the right people see the right threats the moment they matter.

Why Businesses Rely on SIEM

Visibility Without the Overwhelm

You get a clear, high-level view of what's happening in your environment — without digging through logs, dashboards, or technical reports. We handle the complexity and give you clear action to stay safe.

Real Threats, Real Responses

Our security team works around the clock to detect and investigate suspicious activity, taking action before issues turn into outages, data loss, or public incidents.

A Security Team, Without Hiring One

You don't need to build an in-house cybersecurity team. With **our team & Huntress**, you get enterprise-grade monitoring and response that's sized and priced for small and mid-sized businesses.

Compliance Made Easier

If you need to meet **HIPAA, PCI, CMMC**, or other regulatory standards — or expect new requirements in the future — Managed SIEM helps you stay audit-ready by tracking and retaining the right security data and activity.

Built for Today's Threats

From ransomware and credential theft to insider risks and misconfigurations, Huntress Managed SIEM is designed to catch the kinds of attacks that slip past traditional antivirus and basic security tools.

What Makes This Solution Different

Other tools just send alerts — we investigate and take action.

Other SIEMs drown you in data — we give you clear, prioritized findings.

Other solutions require a full security team — you only need us.

With Managed SIEM, you're not just buying software. You're gaining a dedicated security partner.

Who It's Built For

Managed SIEM is a strong fit for:

- **Healthcare clinics** that need to protect patient records and meet HIPAA requirements.
- **Law firms** handling sensitive client and case information.
- **Financial and insurance organizations** safeguarding customer data and transactions.
- **Manufacturers and retailers** with growing networks, cloud systems, and connected devices.
- **Any business that can't afford downtime, data breaches, or reputational damage.**

If your business runs on technology, you need someone keeping an eye on it.

Let's Keep Your Business Moving

You stay focused on running and growing your business.

Our team and **Huntress** will stay focused on watching for — and responding to — the threats that could get in your way.
